

JOEL HENRY

Software Engineer | Application Development & Business Process Analysis

Kingston, Jamaica | joel.henry.023@gmail.com | (876) 586-3224 | joelxhenry.com

PROFESSIONAL SUMMARY

Software engineer with over three years' experience designing, implementing and maintaining ICT solutions, websites and digital platforms across public and private sector environments. Currently delivering application development for a Government of Jamaica agency within established GOJ ICT standards and procedures, covering requirements analysis with end users, technical documentation, unit testing and production troubleshooting. Independently architected and operates a production multi-tenant commerce platform spanning application development, database design, website content management, infrastructure and release governance.

PROFESSIONAL EXPERIENCE

Software Developer, Technical Lead | [Island Routes](http://islandroutes.com), Montego Bay

Nov 2023 – Present

- Built and maintained a centralised content management system serving multiple tourism websites, enabling non-technical marketing and communications staff to manage site content directly, integrated with the Resmark platform for real-time bookings and secure payment processing. (Live: islandroutes.com)
- Launched three production web applications from inception to release, while maintaining, modifying and enhancing 4+ existing systems for stability, performance and security.
- Owned deployment across development, sandbox and production environments for Laravel and .NET applications on AWS (EC2, S3, CloudFront, Load Balancers, Route 53) and on-premise servers, ensuring high performance and availability of public-facing websites.
- Developed automated unit and integration test suites (PHPUnit, Pest) and established QA standards adopted across the team, ensuring requirements were addressed, functionality verified and errors handled properly before each release.
- Gathered and analysed project specifications with cross-functional stakeholders, provided time and resource estimates, and reported on work in progress, work completed and issues affecting on-time delivery.

Fullstack Developer (Consultant) | [The Trade Board Limited](http://thetradeboard.com), Kingston

Jan 2026 – Present

- Design, develop and maintain internal ICT applications supporting the agency's trade licensing and documentation functions, working within established GOJ ICT standards and development procedures.
- Confer with end users and divisional representatives to clarify system intent, output requirements and data-capture needs, and to define appropriate internal checks and controls.
- Lead the technical design of automated document-processing systems and integrations with enterprise trade portals, reducing manual processing effort and improving data quality.

Software Developer | [Crixus Ltd](http://crixus.com), Kingston

Dec 2022 – Dec 2025

- Troubleshooting and resolving critical memory leaks in a legacy production system, restoring stability and eliminating recurring crashes without introducing further defects.
- Reviewed and improved the effectiveness and efficiency of existing systems, reducing API response times by 80% and overall load times by 60% through targeted profiling and code improvements.
- Produced API error-reporting documentation and strengthened platform security through improved API key management and access controls.

KEY PROJECT

Harmon Commerce, Multi-Tenant Commerce Platform | harmoncommerce.com

Independent project - architect and lead engineer

- Designed, built and operated a production multi-tenant platform that automatically provisions each customer an isolated storefront website, administrative dashboard and custom domain with managed HTTPS. (Live: harmoncommerce.com)
- Built the content management layer used to maintain public-facing sites pages, blog posts, product content and media, with draft-and-publish workflows for non-technical users.

CORE COMPETENCIES

Software design and full-stack development (Laravel/PHP, .NET, Node.js, Python, Vue.js, React)

Business and system requirements gathering, analysis and process mapping

Website development, content management systems, DNS, TLS and domain management

Database design, data modelling and query optimisation (PostgreSQL, MySQL, SQL)

Unit testing, quality assurance and production issue troubleshooting

Technical documentation, project estimation and phased delivery planning

EDUCATION

BSc. Computer Science – The University of the West Indies, Mona 2022.
